

Managed Web Hosting & Domain Handling

Advance Solutions has over 15yrs experience in domain and web hosting and currently manage over 200 domains and hosting contracts.

We provide a full and flexible range of plans on our shared Windows 2003 servers located in the UK.

Quality of service and support is paramount to us, we don't claim to be the cheapest host out there, and have no ambition to fulfil that role. What we do claim is our servers, service and support are very high specification and we get most of our business from existing clients and recommendations.

What is "Managed":

Advance solutions offer "managed" hosting, this is important because in the vast hosting market you will find that most bulk providers do NOT offer any managed services or potentially charge an extra fee for setup and configuration. We do all the "legwork" and administration for you, including, setting up emails, transferring domains, configuring your website, setting up DNS records for 3rd party features. All this is provided locally with a dedicated customer service.

Domain Handling

We register / renew and handle all aspects of your domain.

We are approved Nominet members (UK domain registration and management body)

Domains are available cheaply throughout the internet however you are then responsible for the registration and setup yourself, we take care of all this for you and we are the administrative contact for your domain. This can prove invaluable if you require future changes/management of the domain, we also renew remind and renew your domain on your behalf so you can relax and leave us to it.

Our fee for this service is £20 ex VAT.

(Per year and included the registration costs with the relevant domain body)

Standard Features

- Windows server hosting
- Smartermail webmail, calendar and contacts etc
- IIS web server
- Junk/Spam Blocker

Free services:

Many hosts limit and charge extra for resources such as

Diskspace / Bandwidth / FTP accounts / Database users etc

As we aim to provide a flexible local service we don't limit these and offer a "fair use policy" on all these resources, so unless your requirements are extraordinary you won't ever pay extra.

Technical Support included

Advance Solutions offer unsurpassed technical support for all services hosted at NO EXTRA CHARGE.

We tend to offer additional "beyond the call of duty" support where possible to assist the client.

Technical support is offered by us during normal working hours however the backbone hosting environment is supported by a team of technicians 24x7.

Domain handling / transfers and disputes:

Over the years we have seen many difficulties arise when a company wish to transfer a domain to a new host, we are familiar with the legalities on such issues and can manage this process for you if you have difficulties with an old provider. We would hope you would never leave us but in that event we will offer a "no fuss" transfer out policy.

Domains and Hosting services subject to terms and conditions.

Website Development

We develop custom sites and provide graphic design for business websites.

Facebook, Twitter, Ecommerce, Shopping carts, paypal etc we develop sites using key technologies and content management to allow you to change your website. We provide Search engine optimisation ensuring your site is well represented in the major search engines. We provide the services to help your business grow online.

Web Application Development.

With over 15 years experience Advance Solutions specialise in custom web Database applications.

Our Solutions perform key tasks within organisations, many businesses are allowing data to slip through the cracks, contacts in outlook, work, excel, access, sage etc.. sound familiar? We also integrate our products to sage packages to avoid double entry.
